What is QUICK?

The QUICK Integrated Cryptshare function considerably simplifies the use of Cryptshare!

Instead of having to exchange one-time passwords manually, QUICK will take over the management of passwords for the users so users don't have to deal with passwords anymore and can send and receive information passwordless.

How does QUICK affect you?

Cryptshare continues to work as usual. Senders and receivers have the option to activate "QUICK connections" with their contacts. These represent permanently secure connections which can be used by sender and recipient without entering passwords.
